DETAILED ACTION

Election/Restrictions

1. Upon initial review of the claims it appears that claims 1-97 differ in subject matter and therefore require a different search. In accordance with this a restriction is deemed proper.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, drawn to a process wherein a network location acts to coordinate availability, retrieval, or execution of resources associated with that location, classified in class 715, subclass 742.
 - II. Claims 16-27, drawn to a process of customizing multiple diverse workspace objects, classified in class 715, subclass 765.
 - III. Claims 28-38, drawn to a process comprising interactive multicomputer data transfer, classified in class 715, subclass 748.
 - IV. Claims 39-47, drawn to a method comprising on-screen controls, classified in class 715, subclass 851.
 - V. Claims 48-55, drawn to a process wherein distinct interface elements may be manipulated, classified in class 715, subclass 765.
 - VI. Claims 56-59, drawn to a process wherein a user has interactive access to distributed information or functions made available through a certain given user site classified in class 715, subclass 738.

- VII. Claims 60-76 and 96-97, drawn to a process wherein the user interface is capable of establishing, modifying, or observing the function of processes enabled by one or more of the plural sites, classified in class 715, subclass 743.
 - VIII. Claims 77-84, drawn to a method wherein portions of video material are arranged into a different order than that in which it was originally arranged, classified in class 715, subclass 723.
 - IX. Claims 85-95, a method wherein access control or permission, classified in class 715, subclass 740.
3. Inventions Groups (I-III,V-VII) and (IV, VIII and IX) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, Group I can be used using user inputted media operations rather than from the remote media provider. Group II can be used in a process in which an integrator for receiving instruction customizes the media player rather than a set of selectable operations from the remote media provider. Group III can be used in a process based on calling a code module without enabling selection of a media operation. Group V can be used in a process based on locating metadata associated with the media file and storing the media file according to the metadata. Group VI can

be used in a process based on choosing a provider. Group VII can be used in a process based on execution of the code module.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper. A telephone call was made to Mr. Michael Colby on 12/28/06 to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
